

SMOKE VENTILATION

NEW

AXIS-P
pressure axial fans

 **BLAUBERG**
Ventilatoren

Axis-P series

Medium pressure axial fans with air capacity **up to 41,000 m³/h**

■ Purpose

The fans are used for air pressurisation in smoke extraction ventilation systems (up to 55 °C). Creating a positive air pressure differential in stairway enclosures, airlock vestibules and lift shafts helps prevent spreading of smoke and protect the people using evacuation routes from fire hazards. The fans are intended for general ventilation in systems with high air flow rate. The units are suitable for industrial, public, residential, administrative and other spaces.

■ Design

The metal casing with rolled flanges helps achieve outstanding rigidity and minimum clearances between the casing and the blades. There is an inspection hatch in the casing for easy maintenance. All the casing components are powder coated for improved protection against the environmental effects.

■ Motor

The fans are equipped with three-phase (400 V/50 Hz) single-speed 2 or 4 pole electric motors.

■ Impeller

Depending on the size and the required air capacity the fans are equipped with impellers with 6, 8, 10 or 12 blades angled from 25° to 50° with 5° stepping to ensure precise matching of fans with the operating point. The specially designed impeller blades ensure high efficiency of the fan while keeping noise well under control. The impellers are dynamically balanced. Low weight and low moment of the impeller inertia help reduce the fan start-up time.

The fan blades can be made of the following materials:

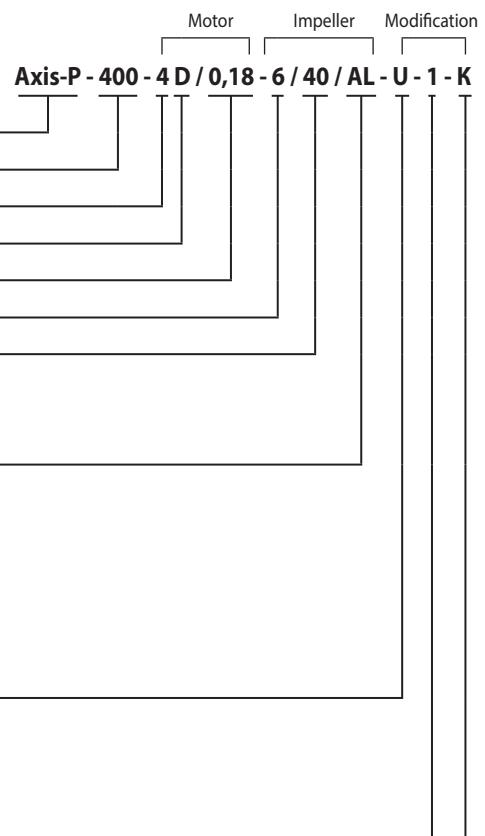

- PP - fiberglass reinforced polypropylene;
- PA - fiberglass reinforced polyamide;
- AL - aluminium.

Please confirm the blade material while placing your order.

■ Installation

The fans can be mounted on any flat surface or directly into a ventilation duct. The units are suitable for both horizontal and vertical configurations. In-duct installation requires flanges to attach the fan to the ductwork. To attach the fan to the floor, a wall or the ceiling use the O-Axis-P carriers (not included as standard, should be purchased separately). The units are suitable for installation on rooftops to provide direct supply of outdoor air to the stairway areas.

■ Designation key

Axis-P — axial pressurisation fan

Standard size: 400; 450; 500; 560; 630

Number of motor poles: 2; 4

Motor phases: E — single-phase; D — three-phase

Motor power [kW] (0,18; 0,25; 0,37; 0,55; 0,75; 1,1; 1,5; 2,2; 3,0; 4,0; 5,5; 7,5; 9,2; 11; 15; 17,5)

Number of impeller blades [items] (6; 8; 10; 12)

Blade setting angle [°] (25; 30; 35; 40; 45; 50)

Blade material:

PP — fiberglass reinforced polypropylene

PA — fiberglass reinforced polyamide

AL — aluminium

Climatic category:

MC — moderate climate

FC — frigid climate

HMC — humid microthermal climate

TC — tropical climate

MC — marine climate

C — common

CM — common marine

_ — universal climatic modification

Placement category:

1 — outdoors

2 — under a shed or indoors with the same conditions as outdoors except solar radiation and precipitation

3 — in closed rooms without artificial climate control

4 — in closed rooms with artificial climate control (ventilation, heating)

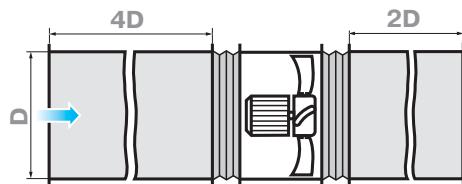

5 — in rooms with high levels of humidity, without artificial climate control

Terminal box: K

AXIAL FAN APPLICATION DETAILS

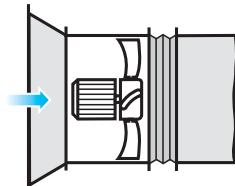

Fan installation into an air duct system:

To ensure a uniform air flow the fan should be preceded by a straight duct section with a cross-section area equal to half of that of the fan. The length of the duct section should be $3 \div 4 D$ (where D is the inner diameter of the fan). The length of the straight duct section downstream of the fan should be $1.5 \div 2 D$. Reduction of the recommended duct length values results in a drop of the fan pressure and performance. To reduce noise and vibration use the EVAF flexible joints.

Fan installation with no upstream ducting:

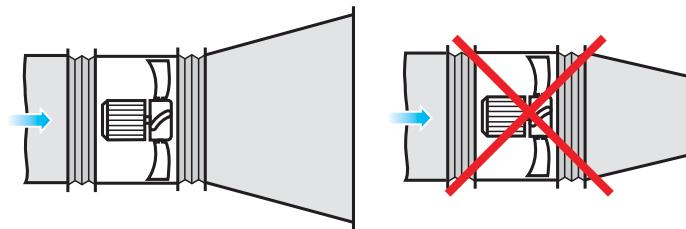

Axial fans without upstream ducting must be equipped with the VK-Axis-P inlet cone to improve the air flow parameters.

Fan installation with no downstream ducting:

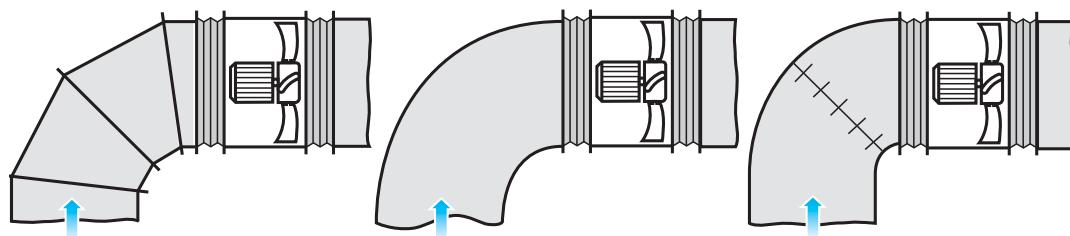

If the axial fan is the terminal device of the ventilation system (i.e. there is no downstream ducting) the unit must be equipped with a diffuser to reduce the air flow velocity and the fan dynamic pressure. Reduction of the air discharge velocity results in a significant reduction of shock losses which are proportional to the square of velocity decrement.

The fan should not be equipped with a downstream contractor.

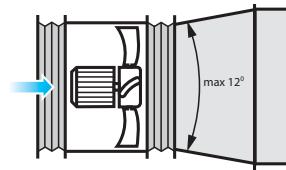

Installation near bends:

To install the fan directly downstream of a bend (elbow) use a curved section with a large bending radius or an array of internal guide vanes.

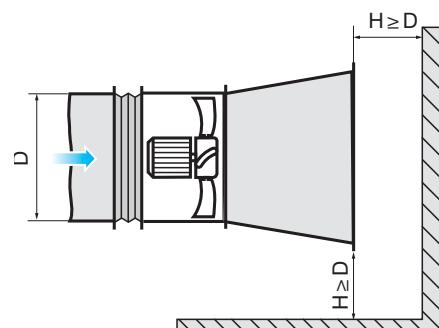

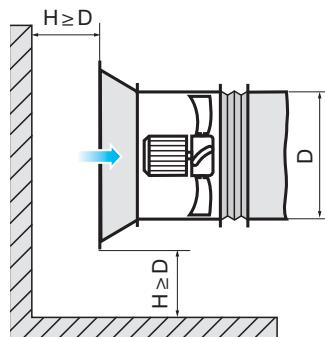

Changing diameter installation:

When changing from a smaller diameter to a larger one use a connector diffuser with the maximum opening angle of 12° .

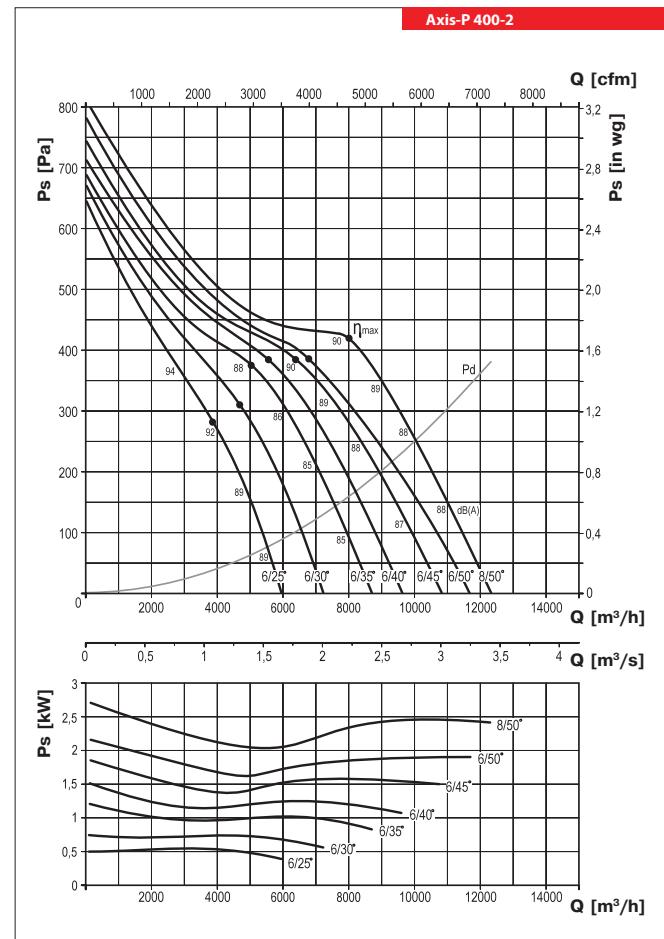

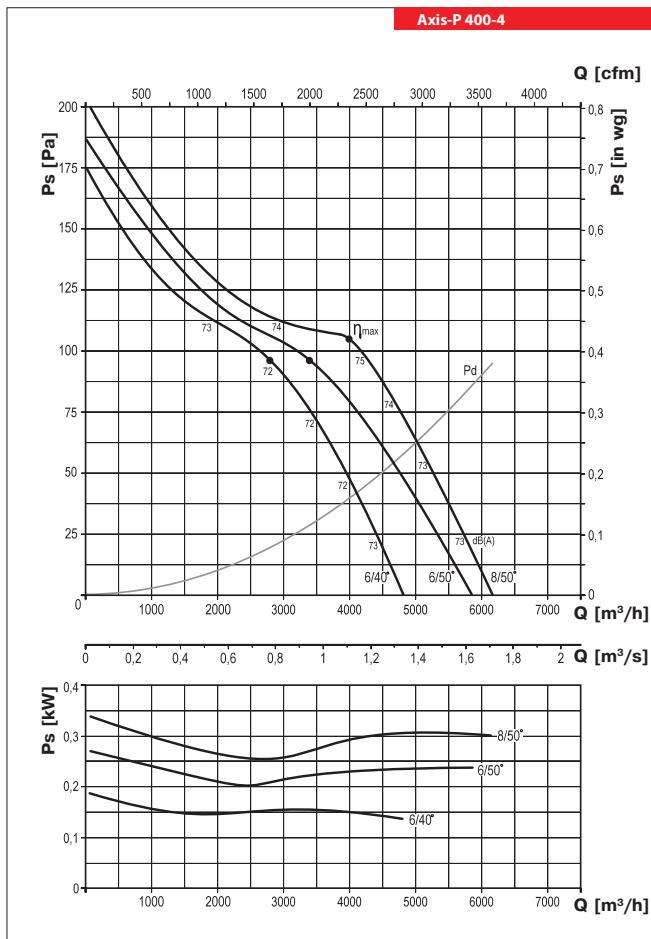

Obstructed space installation:

To ensure normal operation of the fan in an obstructed space make sure to provide for a sufficient distance between the inlet and outlet flanges and the floor, walls, bulky equipment and obstacles.

AXIS-P FAN ACCESSORIES

O-Axis-P

carrier

Purpose

Used for mounting the fans to the floor, walls or ceiling.

Design

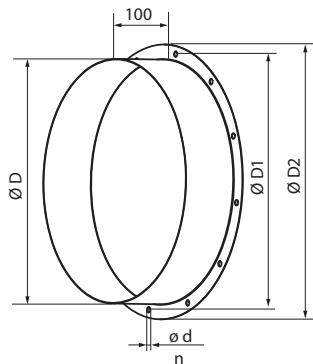

The carrier consists of two brackets. The unit is made of steel with a polymer coating.

Overall dimensions

Model	Dimensions [mm]								Weight [kg]
	A	B	D	H	C	M	Ød	n	
O-Axis-P 400	446	318	438	100	295	44	9,1	3	0,7

O-Axis-P 630	808	578	674	174	515	45	11,5	5	2,13

F-Axis-P

flange

Purpose

Enables attaching round ducts of appropriate size to the fan.

Design

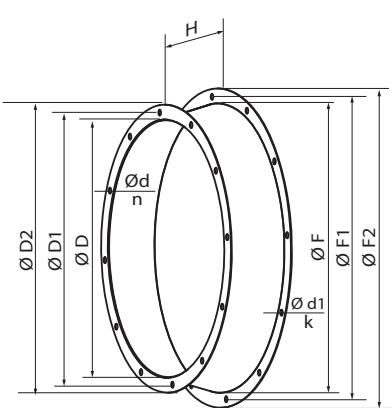

The unit is made of steel with a polymer coating.

Overall dimensions

Model	Dimensions [mm]					Weight [kg]
	D	D1	D2	Ød	n	
F-Axis-P 400	400	438	465	9,5	12	1,3

F-Axis-P 630	630	674	715	11,5	16	2,1

VK-Axis-P

inlet cone

Purpose

The inlet cone should be installed upstream of the fan to improve the air flow parameters. However, it becomes a must in the absence of ducting attached to the fan inlet. The inlet cone helps reduce the fan dynamic pressure and increase the static component of the total fan pressure. The unit can be used in combination with the SZ-Axis-P protective mesh which must be one size larger than the unit.

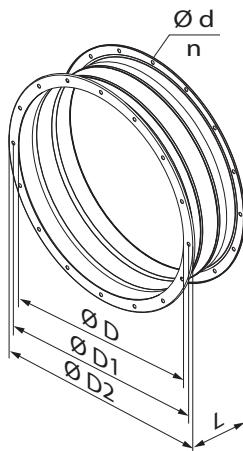

Design

The unit has two flanges and is made of steel with a polymer coating.

Overall dimensions

Model	Dimensions [mm]											Weight [kg]
	D	D1	D2	Ød	n	F	F1	F2	H	Ød1	k

EVAF flexible joint

■ Purpose

Flexible joints cancel out any potential vibrations transmitted by the fans or air handling units to the air ducting as well as partially compensate for the air duct assembly deformations caused by temperature variation.

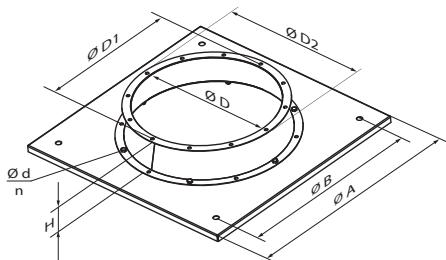

■ Design

The flexible joints are formed by two flanges joined with vibration-cancelling material and are made of zinc-plated sheets and PVC tape reinforced with polyamide fabric. The joints are not intended to withstand any significant mechanical loads and, therefore, may not be used as load-bearing structures.

■ Overall dimensions

Model	Dimensions [mm]						Weight [kg]
	D	D1	D2	L	Ød	n	
EVAF 400	412	438	465	160	9,5	12	2,57
