Roof hood Z-AF

Backdraft damper VRV1-AF

Fire-resistant backdraft damper VRV-AF...400/2

Axial fan Axis-P

Axial smoke extraction fan Axis-FP

Roof adapter PK-AF

Mounting curb SM-AF

FAN INSTALLATION INTO AN AIR DUCT SYSTEM

- o To ensure a uniform air flow, the fan should be preceded by a straight duct section with a cross-section area equal to half of that of the fan. The length of the duct section should be $3 \div 4 D$ (D is the inner diameter of the fan). The length of the straight duct section downstream of the fan should be $1.5 \div 2 D$.
- o Reduction of the recommended duct length values results in a drop of the fan pressure and performance. To reduce noise and vibration, use the VVGF flexible joints.

FAN INSTALLATION WITH NO UPSTREAM DUCTING

- o Axial fans without upstream ducting must be equipped with a VK-AF inlet cone to improve the air flow parameters.

FAN INSTALLATION WITH NO DOWNSTREAM DUCTING

- o If the axial fan is a terminal device of the ventilation system (i.e. there is no downstream ducting), the unit must be equipped with a diffuser to reduce the air flow velocity and the fan dynamic pressure. Reduction of the air discharge velocity results in a significant reduction of shock losses which are proportional to the square of velocity decrement.
- o The fan should not be equipped with a downstream contractor.

INSTALLATION NEAR BENDS

- o To install the fan directly downstream of a bend (elbow), use a curved section with a large bending radius or an array of internal guide vanes.

CHANGING DIAMETER INSTALLATION

- o When changing from a smaller diameter to a larger one use a connector diffuser with the maximum opening angle of 12° .

OBSTRUCTED SPACE INSTALLATION

- o To ensure normal operation of the fan in an obstructed space, make sure to provide for a sufficient distance between the inlet and outlet flanges and the floor, walls, bulky equipment and obstacles.

AXIS-P

Medium pressure axial fans

Use

The fans are used:

- as a part of a smoke extraction system for air pressurization to create a positive air pressure differential in stairway enclosures, airlock vestibules and lift shafts, to prevent spreading of smoke in premises, protect people using evacuation routes from fire hazards and enable conditions for fire-extinguishing measures.
- in general ventilation systems in industrial, administrative and residential buildings.

Air flow:
up to 120 000 m³/h

Design

- The metal casing with rolled flanges helps achieve outstanding rigidity and minimum clearances between the casing and the blades. There is an inspection hatch in the casing for easy maintenance.
- All the casing components are powder coated for improved protection against the environmental effects.
- The weight of the fans may differ from the one stated in the catalogue and depends on the components used (motor, terminal box, etc.).

Motor

- The fans are equipped with three-phase (400 V/50 Hz) single-speed 2-, 4- or 6-pole electric motors.
- Motor with energy efficiency class IE3 on request.
- Motor ingress protection rating is IP55.

Impeller

- Depending on the size and the required air capacity the fans are equipped with impellers with 6 or 8 blades angled from 20° to 50° with variation from 2.5 up to 5° to ensure precise matching of fans with the operating point.
- The specially designed impeller blades ensure high efficiency of the fan while keeping noise well under control. The impellers are dynamically balanced. Low weight and low moment of the impeller inertia help reduce the fan start-up time.
- The fan blades can be made of the following materials:
 - PAG – fiberglass reinforced polyamide
 - AL – aluminium
- Please confirm the blade material while placing your order.

Mounting

- The fans can be mounted on any flat surface or directly into a ventilation duct. The units are suitable for both horizontal and vertical configurations. In-duct installation requires flanges to attach the fan to the ductwork.
- To attach the fan to the floor, the wall or the ceiling use the O-AF carriers (not included as standard, should be purchased separately).
- The units are suitable for installation on rooftops to provide direct supply of outdoor air to the stairway areas.

Modification
AXIS-P 630K - 2D / 5.5 - 8 / 35 / AL - U 1 - K

Axis-P:
axial pressurisation fan

Standard size (duct diameter) [mm]

Modification:
 _: standard casing
 K: shortened casing

Number of motor poles

Motor phase:
 E: single-phase
 D: three-phase

Motor power [kW]

Number of impeller blades [items]

Blade setting angle [°]

Blade material
 PAG: fiberglass reinforced polyamide
 AL: aluminium

Climatic category:
 U: moderate climate (-40 ... +40 °C)
 HL: cold climate (-60 ... +40 °C)
 UHL: moderate and cold climate (-60 ... +40 °C)
 T: tropical climate (-10 ... +50 °C)
 M: maritime moderately cold climate (-40 ... +40 °C)
 O: general climatic modification (except maritime climate) (-60 ... +50 °C)
 OM: general maritime climatic modification (-40 ... +40 °C)
 V: universal climatic modification (-60 ... +50 °C)

Placement category:
 1: outdoors
 2: under a shed or indoors with the same conditions as outdoors except solar radiation and precipitation
 3: in closed rooms without artificial climate control
 4: in closed rooms with artificial climate control (ventilation, heating)
 5: in rooms with high levels of humidity, without climate control

Terminal box:
 _: electric connection through the terminal box on the motor
 K: external terminal box on the fan casing

AXIS-FP

Axial smoke extraction fans

Use

- The fans are used for extraction of smoke in case of fire and removal of hot air outside. The fans are also used for general ventilation systems.
- The fans are rated for permanent operation at ambient air temperatures from -60 °C up to +50 °C (depends on climatic category, see the Designation key). The fans are able to operate 2 hours at the temperatures +300 °C and +400 °C.
- The fans with a fire resistance class of 200 °C/2 hours can be produced on request. The characteristics of the 200 °C/2 hours fans are completely identical to 300 °C/2 hours fans.

Air flow:
up to 114 000 m³/h

Fire resistance rating:
300 °C/2 hours
400 °C/2 hours

Design

- The fan consists of a casing, an impeller and a motor. The metal casing with rolled flanges helps achieve outstanding rigidity and minimum clearances between the casing and the blades. There is an inspection hatch in the casing for easy maintenance.
- All the casing components are powder coated for improved protection against the environmental effects.
- The weight of the fans may differ from the one stated in the catalogue and depends on the components used (motor, terminal box, etc.).

Motor

- The fans are equipped with three-phase (400 V/50 Hz) motors. Motor ingress protection rating is IP55. Depending on the model, the fans have single- or double-speed modifications.
- The single-speed models are equipped with 2-, 4- or 6-pole motors.
- The double-speed models are equipped with 2/4-, 4/6- or 4/8-pole motors.

Impeller

- Depending on the size and the required air capacity the fans are equipped with impellers with 4, 5, 6, 7, 8, 9 or 12 blades angled from 20° to 50° to ensure precise matching of fans with the operating point.
- The specially designed impeller blades ensure high efficiency of the fan while keeping noise well under control.
- The impellers are dynamically balanced. Low weight and low moment of the impeller inertia help reduce the fan start-up time.
- The fan blades are made of cast aluminium.

Mounting

- The fans can be mounted on any flat surface or directly into a ventilation duct. The units are suitable for both horizontal and vertical configurations.
- Installation in the air duct requires flanges to attach the fan to the ductwork.
- To attach the fan to the floor, the wall or the ceiling use the O-AF carriers (not included as standard, should be purchased separately).
- The fans are suitable for installation on rooftops.

Modification
AXIS-FP 630 K - 2 D / 5.5 - 8 / 35 / AL - U 1 - 300/2

Axis-FP:
Axial smoke extraction fan

Standard size (duct diameter) [mm]

Modification:
 _: standard casing
K: shortened casing

Number of motor poles

Motor phase:
E: single-phase
D: three-phase

Motor power [kW]

Number of impeller blades [items]

Blade setting angle [°]

Blade material:
AL: aluminium

Climatic category:
U: moderate climate (-40 ... +40 °C)
HL: cold climate (-60 ... +40 °C)
UHL: moderate and cold climate (-60 ... +40 °C)
T: tropical climate (-10 ... +50 °C)
M: maritime moderately cold climate (-40 ... +40 °C)
O: general climatic modification (except maritime climate) (-60 ... +50 °C)
OM: general maritime climatic modification (-40 ... +40 °C)
V: universal climatic modification (-60 ... +50 °C)

Placement category:
1: outdoors
2: under a shed or indoors with the same conditions as outdoors except solar radiation and precipitation
3: in closed rooms without artificial climate control
4: in closed rooms with artificial climate control (ventilation, heating)
5: in rooms with high levels of humidity, without artificial climate control

Fire resistance rating:
300/2: 300 °C, 2 hours
400/2: 400 °C, 2 hours

CARRIER O-AF

- Used for mounting the fans to the floor, walls or ceiling.
- Made of steel with a polymer coating.
- Number of carriers required to complete one fan: 1 pc. (one carrier consists of two brackets).

FLEXIBLE JOINT EVAF-AF

FIRE-RESISTANT FLEXIBLE JOINT EVAF-AF...400/2

- Flexible joints cancel out any potential vibrations transmitted by the fans or air handling units to the air ducting as well as partially compensate for the air duct assembly deformations caused by temperature variation.
- The flexible joints are formed by two flanges joined with vibration-cancelling material and are made of polymer-coated steel and PVC tape reinforced with polyamide fabric. The joints are not intended to withstand any significant mechanical loads and, therefore, may not be used as load-bearing structures.
- The **EVAF-AF...400/2** joints are designed for operation at a temperature of 400 °C for 2 hours.

INLET CONE VK-AF

- o The inlet cone is recommended to be installed upstream of the fan to improve the air flow parameters. However, it must be installed in the absence of ducting attached to the fan inlet. The inlet cone helps reduce the fan dynamic pressure and increase the static component of the total fan pressure. The unit can be used in combination with the **SZ-AF** protective mesh which must be one size larger than the unit.
- o The unit has two flanges and is made of steel with a polymer coating.

*If PK-AF is used together with other accessories, for example F-AF, EVAF-AF, VRV-AF, attachment of the accessories is done through the holes marked with Ød1. If no additional accessories are used, the holes marked with Ød1 must be sealed in any way that prevents water penetration.

MOUNTING CURB SM-AF

- The unit is used for mounting fans on rooftops.
- The outer frames are supported for installation on the roof. The mounting curb is equipped with a side inspection door. Modifications are available to order according to the naming system.

**BACKDRAFT DAMPER VRV-AF
FIRE-RESISTANT BACKDRAFT DAMPER VRV-AF...400/2**

- o The backdraft damper with spring-loaded blades is used for shutoff of air flow in the air ducts and prevention of air backdraft during standstill of ventilation equipment. The damper blades are opened with the air pressure and closed with the spring.
- o The damper placement in a ventilation system should account for the air flow direction. In case of a horizontal installation of the damper, the pivot axis of the blades must be true horizontal. A vertically installed damper is only suitable for air extraction duty. To assemble the **Axis-FP** fans, use the **VRV-AF...400/2** dampers, which are designed to operate at a temperature of 400 °C for 2 hours.
- o The unit casing and the two spring-loaded blades are made of polymer-coated steel.

BACKDRAFT DAMPER VRV1-AF

- o The backdraft damper with a gravity plate is used for supply pressurisation systems and designed for shutoff of air flow during standstill of ventilation equipment. The damper plate opens with the pressure created by the air flow and closes under its own weight, blocking the duct.
- o The **VRV1-AF** damper is only suitable for air supply duty and must be installed in the vertical position.
- o The damper is made from polymer coated steel and has a single blade which closes under its own weight.

PROTECTIVE MESH SZ-AF

- o Protects the fans against ingress of foreign objects.
- o Protective mesh with 25x25 mm cells

SILENCER SD

- The silencer is used for attenuation of the operation noise generated by ventilation equipment and spreaded in the the air ducts. Designed for connection to round air ducts.
- The **SD** silencer has a polymer-coated steel casing filled with noncombustible material that has a protective coating to prevent fiber deformation.

Noise level reduction

- The values shown in the tables represent the difference between the sound power level (L_w) of the combination of the fan, the attenuator and the power of one fan.
- To determine the sound power level of the fan equipped with a silencer, the insertion loss must be subtracted from the rated sound power level (L_w) of the fan on the mid-frequency spectrum in the octave band given in the fan specifications.

SPRING-LOADED ANTIVIBRATION MOUNT SIF-AF

- o The **SIF-AF** antivibration mounts are used for attenuation of noise and vibration generated by ventilation equipment. The antivibration mounts reduce dynamic loads, increase reliability and durability of ventilation equipment.
- o **Four antivibration mounts are required to complete one fan.**

Model	Load [kg]	Dimensions and mounting holes [mm]				
		L	H	C	Ød	Width
SIF-AF-1	7	105	70	82	10.5	58
SIF-AF-2	15	105	70	82	10.5	58
SIF-AF-3	24	105	80	82	10.5	58
SIF-AF-4	29	105	90	82	10.5	58
SIF-AF-5	35	105	113	82	10.5	58
SIF-AF-6	50	105	113	82	10.5	58
SIF-AF-7	80	105	113	82	10.5	58
SIF-AF-8	120	105	113	82	10.5	58

RUBBER ANTIVIBRATION MOUNT SIG-AF

- o The rubber antivibration mounts **SIG-AF** are used for attenuation of noise and vibration generated by ventilation equipment.
- o The antivibration mounts reduce dynamic loads, increase reliability and durability of ventilation equipment.
- o **Four antivibration mounts are required to complete one fan.**

Model	Load [kg]	Dimensions and mounting holes [mm]

SIG-AF-3	50-120	10	M10	76	11	45	105	52

OPERATION OF FANS WITH FREQUENCY CONVERTERS

Ventilation systems produce a heavy load on the electrical systems of a building. Therefore, reducing the power consumption is among the top priorities for construction project designers.

DIRECT ON-LINE STARTING (DOL)

As a rule, smoke extraction systems utilize large high-performance fans. During starting the high inertia of the shaft causes a substantial increase in the start-up time – i.e. the time from the application of power to reaching the rated speed. As a result the motor is subjected to high starting current for a prolonged period of time.

Current diagram with direct on-line starting

Standard switchgear (automatic circuit breakers, contactors and motor starters) is not designed to withstand prolonged overloads causing the fan to shut down automatically during starting.

Using switchgear with a higher maximum current rating renders the electric motor protection system less sensitive.

As a result the switchgear will not be able to detect motor overload in time due to a higher current sensing threshold.

Such challenges can only be addressed by utilizing a soft starter or a frequency converter to start the fan without causing a prolonged overload.

Torque diagram with direct on-line starting

FREQUENCY CONVERTER

A frequency converter (FC) consists of two main component blocks. One converts alternating current (50 or 60 Hz) into direct current.

The other converts direct current into alternating current of variable frequency ranging from 0 to 250 Hz.

By controlling the frequency output the FC offers a broad range of motor speed regulation.

Current diagram with FC starting

During the starting the FC raises the frequency from 0 Hz to the electrical mains frequency (50 or 60 Hz).

As the frequency is increased gradually, the motor can be assumed to operate at its nominal speed for a given frequency value.

Furthermore, on the assumption that the motor runs at its nominal speed the nominal torque should be immediately available whereas the current will be approximately equal to the nominal value.

Torque diagram with FC starting

SOFT STARTER

Unlike an FC, a soft starter does not change the frequency of speed.

Instead it gradually increases the voltage supplied to the motor – from the initial level to the nominal level.

The very low voltage initially supplied to the motor during starting helps avoid sudden jolts.

Both voltage and torque increase gradually.

Current diagram with soft starter

Torque diagram with soft starter

APPLICATIONS IN VENTILATION SYSTEMS

Using an FC or a soft starter allows to reduce the starting current thereby avoiding a loss of voltage in the electrical mains.

In addition to that the starting torque and mechanical strain on equipment are also reduced which translates into extended maintenance and repair intervals.

General exhaust ventilation (GV) systems and emergency smoke extraction (SE) systems of car parks, warehouses, utility and industrial spaces can be integrated into a single system at the design level.

As the air flow rate a GV system is considerably lower than that in an SE system a high-capacity fan rated for smoke extraction duty runs in partial load mode.

Frequency converters can be programmed for several fixed-speed settings to enable operation in GV and SE modes.

The fan operating modes can be switched upon receiving an external signal from the control system.

Such integration of ventilation systems allows overall cost savings.

FC-51 AND FC-101: WHEN TO USE?

This catalogue features two series of frequency converters: FC-51 and FC-101.

The FC-51 series is only suitable for general ventilation systems.

If intended for a smoke extraction system, the fans should be fitted with the FC-101 series units as they feature an integrated fire mode.

When activated the integrated protection equipment of the frequency converter is overridden enabling the unit to continue operation despite the possibility of sustaining irreparable damage due to overheating or overloading.

In case of a fire, the FC-101 series frequency converters are capable of maintaining a higher air pressure level at landings compared to other areas of the building in order to keep the landings smoke-free.

MICRO DRIVE FC-51

Frequency converters

Use

- o This general-purpose variable frequency drive is designed for regulating the rotation speed of an AC electric motor with a maximum power output of 22 kW.
- o This unit is only suitable for general ventilation systems.

Features

- o The drive construction prevents forced air flow passage through its internal electronic components.
- o The internal circuit boards are well-protected.

Filter

- o The unit features an integrated HF filter which blocks RF interference from the motor and enables the use of a shielded cable up to 15 m long or unshielded cable up to 50 m long as per the applicable EU regulations.

Inputs and outputs

- o 5 programmable digital inputs
- o PNP/NPN logic
- o 20-5000 Hz pulse input
- o One 0-10 V or 0-20 mA analogue input
- o One 0-20 mA analogue input
- o Thermistor input (analogue or digital)
- o 1 analogue output
- o 1 relay, 240 V, 2 A
- o RS 485
- o MODBUS RTU

Control panels

Designation	Code
VLT control panel LCP 11 (without potentiometer)	132B0100
VLT Control Panel LCP 12 (with potentiometer)	132B0101

Designation	Code
Remote panel mounting kit	132B0102

Installation

- o Back-to-back installation for space savings. Thanks to a compact design the drives can be mounted immediately next to one another without any performance penalties.

BASIC DRIVE FC-101

Frequency converters

Use

- This general-purpose variable frequency drive is designed for regulating the rotation speed of an AC electric motor with a maximum power output of 90 kW.
- This drive is suitable for both general ventilation and smoke extraction ventilation systems.

Certified fire mode

- The fire mode prevents the drive from a self-protecting shut-down. While in this mode the drive continues to perform speed regulation duty for mission-critical fans irrespective of control signals, warnings and alarms which may otherwise force it shut down.

Filter

- A built-in throttle on the DC link ensures a low harmonic load on the power mains as per the EN 61000-3-12 standard requirements.

Inputs and outputs

- Four PNP or NPN programmable digital inputs, 0-24 V DC
- 2 analogue inputs (0-10 V or 0/4-20 mA)
- 2 analogue outputs (0/4-20 mA)
- 2 relay outputs
- MODBUS RTU (RS 485)
- BACnet MSTP
- FC Protocol
- N2 Metasys
- FLN Apogee

Installation

- Thanks to an ultra-compact design the drive can be easily fitted into a larger unit or panel of an air ventilation system. The casings are rated IP20/Type 1/IP21 (optional) and IP54.

VLT® HVAC Basic frequency converters rated up to 22 kW are fitted with circuit boards with a special class 3C3 protective coating. For frequency converters rated higher than 22 kW this protective coating is optional while, the 3C2 coating is standard.

VLT® FC 101 HVAC Basic Drive frequency converter options

Order code	Description
132B0200	Operator's digital panel
132B0201	Kit for remote mounting of the operator panel to an IP55 cabinet, including 3 m cable
132B0202	Decoupling plate for H1 and H2 standard sizes
132B0204	Decoupling plate for H3 standard size
132B0205	Decoupling plate for H4 and H5 standard sizes
132B0207	Decoupling plate for H6 standard size
132B0242	Decoupling plate for H6 standard size (extra large)

Order code	Description
132B0208	Decoupling plate for H7 standard size
132B0243	Decoupling plate for H7 standard size (extra large)
132B0209	Decoupling plate for H8 standard size
132B0244	External EMC filter class A1/B1 for power output from 0.37 to 2.2 kW
132B0245	External EMC filter class A1/B1 for power output from 3 to 7.5 kW
132B0246	External EMC filter class A1/B1 for power output from 11 to 15 kW
132B0247	External EMC filter class A1/B1 for power output from 18.5 to 22 kW
